Abstract:

This paper points out the style and formal features for paper submission in DC-2005 to be held at University Carlos III of Madrid. Most likely the contents of this paper would deal with metadata vocabularies, in its wide perception at Digital Information modern background.

Keywords:

Dublin Core conference, Paper submission, metadata vocabularies, author guidelines, layout example.

1. Introduction

Metadata based on standards such as Dublin Core are a key component of information environments from scientific repositories to corporate intranets and from business and publishing to education and e-government.

DC-2005 - the fifth in a series of conferences previously held in Tokyo (2001), Florence (2002), Seattle (2003), and Shanghai (2004) - will examine the practicalities of maintaining and using controlled sets of terms ("vocabularies") in the context of the Web.

DC-2005 aims at bringing together several distinct communities of vocabulary users, and invite them to make contributions using this style presentation.

1.1 Users of metadata standards

This community includes such as Dublin Core and Learning Object Metadata (LOM), with their sets of descriptive "elements" and "properties".

1.2 The W3C Semantic Web Activity

SW Activity has formalized the notion of "ontologies" (1). Bla, bla, bla, bla, bla, bla, xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx...

2. Page setup

1. Page border 3.5 cm left margin; 3cm top, bottom and right margins.
2. 42 lines on every page, 40 characters on

each line.
